RAPAT is an easy-to-use Excel-based tool created to help innovators and technology developers achieve successful product acceptance and deployment. The latest version of RAPAT is available at: www.astrimar.com/RAPAT.

The tool helps users to:

- define technology and user requirements
- understand and manage commercial and technical risks
- plan required testing and assurance activities
- prepare funding applications, including market appraisals, TRL assessment and costs estimates
- align with responsible innovation expectations
- document fulfilment of requirements to facilitate product acceptance/certification

It facilitates an efficient risk-based approach from concept development to identification and collation of appropriate assurance evidence to demonstrate the extent to which a product will meet both user and regulatory requirements.

| KEY FEATURES | | |
|---|---|---|
| Supports any technology | Clear & simple guidance | Windows 10 Excel based tool |
| A range of risk assessments | Links to regulations, codes & standards | Series of questions & worksheets |
| Help sheets & tutorials | Progress & tracking dashboards | Customizable assessments & output |

The tool is also able to support acceptance/procurement authorities reviewing the submitted evidence of the product's fitness for purpose and certification when required.

The "Current Status" worksheet, is supported by a series of focussed worksheets recording information / data to support qualification and certification of the device or technology as it progresses.

USER TESTIMONIAL:

"RAPAT gives developers a much better understanding of what is required for product acceptance. It drives them to think about user requirements alongside commercial and technical risks ensuring these are understood and addressed from the outset. The tool enables best practice improving capability and efficiency in the UK supply chain."
